

What patients are saying about the DRX9000™*

"Before I began treatment on the DRX9000™ my lower back pain was so bad I couldn't even bend down to tie my shoe. The outside of my leg was numb down to the bottom of my foot. Since treatment, my lower back pain has completely subsided and I've regained feeling in my leg and foot. Thanks to the DRX9000™ I've been able to get back to a normal life doing everything I used to do."

- Don Pfaender

"Before treatment on the DRX9000™ my lower back pain was so severe I was not able to do very much at all. Since treatment, I can do all the things I had not been able to do for a long time. I can go out dancing again and can even do the polka. It's been a big improvement to the quality of my lifestyle."

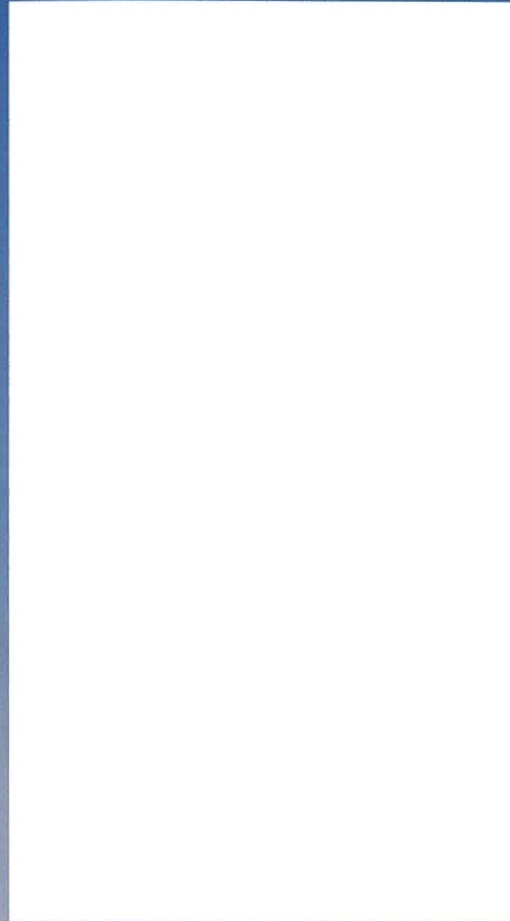

- Patricia Niznik

DRX9000™

Treatment of Chronic Back Pain Without Surgery!

NON-INVASIVE • NON-SURGICAL • BACK PAIN RELIEF

Treatment of:

- Herniated Discs or Bulging Discs
- Degenerative Disc Disease

Making Life Better, One Treatment at a Time

Back Pain & the DRX9000™

Common Causes of Back Pain

- The discs in your spine act as shock absorbers. Herniation or “bulging” of the discs may occur due to wear and tear. This is one of the most common causes of lower back pain.
- Disc degeneration can occur when the spongy disc dries out. Over time or with injury, discs may dry out, tear and put pressure on the nerves. The result is muscle tension and back pain.

“The DRX9000™ is designed to relieve pain and promote healing.”

*Non-Invasive.
Non-Surgical.*

With the DRX9000™, You Can Take Hold of Your Life Again!

- Reduce your back pain.
- Reduce your symptoms.
- Reduce your disability.
- Improve your quality of life!

About the DRX9000™

- The DRX9000™ is effective in treating low back pain associated with herniated discs, bulging discs and degenerative disc disease, allowing patients to return to an active lifestyle.

Treatments on the DRX9000™

- Consists of 20 sessions over a period of six weeks.
- Each session lasts 30 minutes.
- Following each therapy session, a cold pack and/or electrical stimulation is applied to help restore muscle tone.
