Revolutionary Pain Relief™

A Legal Revolution

CBD CLINIC™ is the first line of FDA-registered, non-prescription, topical pain relief products made with cannabidiol (CBD). They can be legally distributed throughout the US—regardless of state marijuana or hemp laws—due to the products' compliance with the US Food & Drug Administration (FDA), the US Drug Enforcement Administration (DEA) and US hemp cultivation laws. CBD CLINIC products are the first CBD topical to use FDA-approved analgesic ingredients and are produced in an FDA-compliant, FDA-audited manufacturing facility.

An Efficacy Revolution

Since its introduction in July 2016, healthcare professionals in every state have been using CBD CLINIC to treat their patients' chronic and acute musculoskeletal pain associated with rheumatoid arthritis, fibromyalgia, sciatica, sports injuries, car accidents, surgical rehabilitation and many other causes. Clinical feedback has been extraordinary. We often receive comments such as "My patients love it!", and "For lots of our patients, CBD CLINIC has become their go-to solution for rapid relief from pain". The products have also provided significant relief for current and retired professional athletes.

A Natural Science Revolution

CBD CLINIC products provide rapid and lasting relief from joint and muscle pain, naturally.

A proprietary blend of natural emollients facilitate deeper and faster absorption of pain-relieving compounds (terpenes) ^(1,2,3).

Powerful terpenes (aromatic oils and analgesic compounds) penetrate to pain receptors in the body via the Endocannabinoid System to interrupt pain signaling ^(4,5,6).
