## DNA Oxidative Damage Test

**This is one of the 8 True Prevention Tests. We do not have to get chronic illnesses. The majority of chronic illnesses can be prevented with antioxidants and magnesium in levels that match our body's demands.**

This test helps to identify if your body is at an optimal healthy state. The faster the rate of DNA breakdown, the higher the risk of developing damage to your organs leading to chronic illnesses.

The big question is are you doing enough with your diet, nutritional intake, exercise and is it working?

The great news, we do not have to wait for something to go wrong. You really can stop unnecessary illnesses.

If the test comes back with great results you are meeting your body's nutritional demands. If the test does not come back with great results further testing is used to determine your specific nutritional needs.

## DNA Breakage Prevention

**Healthy DNA can help you prevent age related illnesses:**

- Maintain healthy joints
- Protect yourself from inflammation
- Keep a healthy cardiovascular system
- Maintain your memory
- Keep your energy
- Protect your eyes and gums
- Protect your skin
