

The STA™ System

**The MORE comfortable injection for the dentist
is the MOST comfortable injection for the patient.**

- Intraligamentary injections can be administered more precisely and with less stress as STA provides audio and visual confirmation of proper anesthetic delivery.
- STA increases your success administering the Block - proper technique prevents needle deflection – improving your ability to achieve success the first time.
- STA means that you get right to work – with faster onset – and your patients return to their routine without collateral numbing.
- STA's computer controlled delivery allows you to administer anesthesia below the patient's pain threshold – without utilizing your patient's least favorite instrument... the dental syringe.

**“STA allows
me to begin every
injection technique
with significantly
less stress for me
and my patient”**

*Dr. Marty Jablow
Woodbridge NJ*

Is there “STRESS” administering?	Patient Anxiety	Satisfaction
<p>Do you personally experience “any” stress or anxiety when administering anesthesia to patients (any and all)?</p> <hr/> <p>Yes 59%</p> <hr/> <p>No 41%</p> <hr/>	<p>What percentage of your patients fear the needle - syringe & initial injection?</p> <hr/> <p>None 4%</p> <hr/> <p>1% - 10% 14%</p> <hr/> <p>11% - 20% 11%</p> <hr/> <p>21% - 30% 12%</p> <hr/> <p>31% - 40% 16%</p> <hr/> <p>40% - 60% 23%</p> <hr/> <p>75% or more 20%</p> <hr/>	<p>How satisfied are you with your STA System?</p> <hr/> <p>Extremely satisfied One of the best investments I've made 27%</p> <hr/> <p>Quite satisfied It exceeded my expectations 45%</p> <hr/> <p>Satisfied STA was what I expected 23%</p> <hr/>

PROCEDURE GUIDE

PALATAL

“One of the least favorite injections for the patient and the dentist.”

More comfortable using the pre puncture technique

Reduced dosage of anesthetic

No collateral numbness

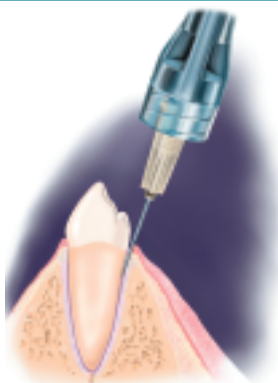

Improved hemostasis for more accurate impressions

Ability to assess the smile line without distortion

Anesthetize five teeth and surrounding tissue with just one injection

PDL

“The amount of pressure delivered by a traditional syringe makes it uncomfortable for the patient and dentist.”

More comfortable as the STA indicates proper needle placement

More comfortable as the STA delivers the flow of anesthetic below the PATIENTS pain threshold

Replaces the mandibular block injection

Site specific – single tooth anesthesia

Rapid on-set

BLOCK

“The mandibular block injection can be hit or miss using a traditional syringe”

Increased tactile feel and control

Improved accuracy – no needle deflection

Better visibility than the traditional syringe

A more comfortable and predictable experience for you and your patient.

Rapid on-set

C O M P U T E R - C O N T R O L L E D

*The **MORE** comfortable injection for the dentist
is the **MOST** comfortable injection for the patient.*

SPECIALTY

PEDO

The STA handpiece is visually less threatening than the traditional dental syringe

The STA handpiece can be modified to hide within the dentist's hand – out of sight for those patients that are a bit more anxious

Anesthetic is delivered "BELOW" the patient's pain threshold

No more lip or tongue biting – no collateral numbness

Happy Moms and Dads – fewer calls after hours

COSMETIC

Ability to assess the smileline immediately – make a better first impression

Easily perform AMSA and P-ASA injections comfortably and confidently

Fewer injections for you and your patient

No collateral numbness – great for your working professional patients

The standard of technology that your patients have come to expect

ENDO

The most predictable intraligamentary injection you'll ever give

STA provides confirmation when you're in the right location for the intraligamentary injection

STA allows you to anesthetize one tooth – with no collateral numbness

STA delivers profound anesthesia for 30-45 minutes

Stop waiting for the Block, start using the STA intraligamentary injection as your PRIMARY technique and start working immediately
