

Paul D Pierce, DC

Blair Upper Cervical
Specific Chiropractor

Celia F Ringstad, DC

NeuroMuscular
Re-Education Specialist

Superior Health Solutions

TERMS OF ACCEPTANCE

When a patient seeks Chiropractic health care, and when a chiropractor accepts a patient for such care, it is essential that they are both seeking and working for the same goals.

Chiropractic has only one goal. It is, therefore, important that the patient understands the goal and the means and methods that will be used to attain it. In this way, there will be no confusion, misunderstanding nor disappointment.

The purpose of Chiropractic is to restore and maintain the mechanical integrity of the brain stem, spinal cord and nerves. These vital nerve pathways are housed in and protected by the bones of the spine. Tiny misalignments of the vertebrae or bones of the spine, which interfere with the function of these nerve pathways, are called **SUBLUXATIONS**. They come from many causes and prevent various tissues, muscles and organs from working properly.

By means of a chiropractic specific adjustment, subluxations are corrected, thus restoring normal nerve function. The goal of chiropractic is to correct vertebral subluxations for the purpose of restoring the proper transmission of nerve energy over the nerve pathways so that every part of the body may have a proper nerve supply at all times. This allows the **INNATE** healing ability of the body to work at 100% maximum potential and efficiency.

With a proper nerve supply, health improves. Often, symptoms clear up; sometimes quickly – sometimes slowly – sometimes only partially – or not at all. Regardless of what disease a patient may or may not have, a chiropractor does not offer to cure it, treat it, or offer advice regarding it. The only goal of Chiropractic is to allow the body to better express its own innate health potential. The only method used is the correction of vertebral subluxation.
