

# My Success Story

I was referred to the office by my sister, Becky Tholan.

I was particularly concerned about my daughter Makayla who suffered from severe upper respiratory problems. She needed to use a nebulizer and Albuterol during the winters for the past two years.

Makayla needed the nebulizer every 3 hours. Therefore, I had to stay home a lot to take care of her as well as my two older boys.

Before Dr. Mariano we went to a regular doctor who diagnosed Makayla with an underdeveloped bronchial area. As a result, she had upper respiratory infections which one night prompted us to call an ambulance.

The first results from care brought forth worse symptoms and I thought that Makayla needed to go back to the primary care physician. After about 2-3 weeks of care things began to get better. Now for the past year the attacks have been gone completely.

Now that Makayla has regained her health I'm looking forward to never using the nebulizer again.

Other members of my family have also benefited from care. My daughter Jillian had a bulge on her spine (from induced labor) and now it is gone. My son Christopher had bloody noses which have now gone away. Lastly, my husband Chris no longer has any acid reflux.
