Share Chiropractic With Others

As the holidays approach many of us see family and friends more often. The topic most often discussed is each other's health care status. Well this holiday season when your family or friends are complaining about their health status, why not tell them about Chiropractic and the multitude of benefits you have received from regular adjustments?

Doesn't it bother you to see your friend's child on a nebulizer? How about your relative who suffers from repeated sinus infections and is always on antibiotics because of them? How about a child with cancer, who needs a huge immune system boost, so that her body could fight back? How about the child that gets strep throat 5 times over the winter? Also, your friend who suffers from migraine headaches and always is taking prescription drugs to cover up the symptom? What's holding you back? Do you think others might think you're crazy if you tell them that chiropractic can and will change their life?

In today's society we often sit back and let others do the talking. We stay in safe mode and don't go too far out of our comfortable box. Inside saying... well what if I tell my friend about chiropractic and it doesn't work? What if they can't afford it? What if they think I am nuts telling them their body has an amazing healing power if it's free of nerve interference? It's time for the "what if's" to end! What if you don't tell them and tomorrow they drop dead? Now that may seem extreme to you, but it can happen. What if that adjustment they never had could have prevented them from having a heart attack, or their child from having an asthma attack? What if that adjustment prevented them from going to the walk in clinic and getting drugs that reacted in their body causing more sickness and maybe even death?

CHIROPRACTIC IS FOR EVERYONE WITH A SPINE AND NERVOUS SYSTEM!!! YOU DON'T HAVE TO BE SICK TO GO TO A CHIROPRACTOR. We love people that come in to be adjusted so they don't get sick. We love to check newborn babies on their way home from the hospital. One of the most traumatic things we ever did was being born and that's what a so-called "normal" delivery. MOST HEALTH ISSUES START WITH THE BIRTH PROCESS!

Giving someone the power of knowledge in understanding that there is another form of true wellness care, instead of the sick care we are so use to, is the best gift you will ever give to someone. It's a gift that allows people to live in a world free of pain, drugs, and DIS-ease. Chiropractic is much too valuable to keep to yourself. IF YOU NEED ANY INFORMATION REGARDING CHIROPRACTIC PLEASE ASK A STAFF MEMBER.

HAPPY HOLIDAYS
